

ABSTRACT

Due to the advancement in technology and the growing need to manage academic and personal responsibilities efficiently, there is need of the system which simplifies student life management. Students often struggle to balance their studies, schedules, tasks, and personal well-being due to the lack of a unified platform, making an AI-powered solution a valuable and effective alternative. StudentHub is a web-based application designed to assist students in organizing and managing various aspects of their academic and personal life through the use of artificial intelligence. This project simplifies the tasks of handling each student's schedule, assignments, goals, and personal well-being, which can be accessed by the student or the administrator. This system has more user-friendly interface and doesn't need any formal knowledge to carry out the operation in a smooth and effective manner. This application includes various features like AI-based task and schedule management, assignment and deadline tracking, personalized study recommendations and well-being monitoring which helps in effectively using the application and also reduces the possibility of the errors.
